Farm, Fish, & Food Enterprise Viability in New Hampshire

An initiative of the New Hampshire Food Alliance 2015
The New Hampshire Food Alliance envisions a food system that works for all in New Hampshire: people, businesses, communities, and the environment.
Goals

People understand that their local food choices support thriving businesses, healthy communities, and vibrant working landscapes.

Everyone has access to healthy, affordable, and culturally diverse food.

Local farm, fisheries, and food businesses are profitable and rewarding to all involved.

Policy, regulation, and infrastructure supports long-term local and regional food production, distribution, and marketing.

The ecosystems and resources that sustain a robust food system are conserved and enhanced.

Strategy

Our strategy for realizing our vision and goals has four main components.

Food systems perspective
The food system is a complex and dynamic interrelation of economic, environmental, cultural, and political factors that influence how food is produced, processed, transported, and consumed. A systems perspective recognizes that change in one part of the system may influence many other parts, and seeks to identify and understand these consequences, both positive and negative.

Network building
Networks consist of diverse organizations, institutions, businesses, and individuals that align their shared interests around common goals. By growing a network of relationships and connections throughout the food system, we can learn from each other, leverage resources, and increase our impact throughout the state and New England region.

Identifying areas of leverage and opportunity
To determine where to focus our collaborative energy and resources, we listen to and learn from people across the state and region, synthesize research, and together identify areas in the food system where we believe targeted shifts could result in positive impacts throughout the rest of the system. This ongoing and evolving process will ensure that the NH Food Alliance reflects the unique interests and needs of Granite Staters now and in the future.

Growing one initiative at a time
By focusing our collaborative efforts on specific, critical concerns, we can continue to nurture the growing network, learn and respond to changing conditions, and achieve lasting, meaningful impact. Therefore, we will expand the scope of the NH Food Alliance one initiative at a time. While farm, fish, and food enterprise viability is the focus of our first initiative, we anticipate that the Alliance’s strategic efforts will expand to other initiatives in the future.

The New Hampshire Food Alliance is made possible by hundreds of volunteers across the state and the generous support of The John Merck Fund, The New Hampshire Charitable Foundation, The Kendall Foundation, Share our Strength, Jane’s Trust, and the UNH Sustainability Institute. The University of New Hampshire Sustainability Institute coordinates the New Hampshire Food Alliance.
The NH Food Alliance is a growing network of people working together to build a food system that is good for people, businesses, communities, and the environment. *Farm, Fish, and Food Enterprise Viability in New Hampshire: An initiative of the New Hampshire Food Alliance* ("Viability Initiative"), was created to provide a common focus and agenda for the collaborative work of the NH Food Alliance.

As the first strategic effort of the NH Food Alliance, the Viability Initiative is the result of over two years of building our network, listening to the concerns and hopes of hundreds of New Hampshire residents, and synthesizing dozens of food system reports. The common thread emerging from this work was that thriving local businesses are at the heart of our food system and can create cascading benefits for us all. The Viability Initiative outlines challenges and opportunities for farmers, fishermen, and food entrepreneurs, and describes how the NH Food Alliance will collaborate within a network structure to support food enterprises and promote a growing, healthy food system that benefits all residents in New Hampshire.

For the purposes of this initiative, we consider an enterprise to be viable when it profitably delivers value to its customers in a way that is sustainable for all of its stakeholders, while contributing to healthy families, communities, and the environment. Four opportunity areas support this initiative's food systems approach to strengthening enterprise viability: education, market development, food accessibility, and land and sea resources. Within each of these opportunity areas we identify goals, potential approaches, and suggested indicators of progress.

Food is a powerful driver of economic development, public and ecosystem health, and vibrant working landscapes. When we strengthen food enterprises - the entrepreneurial backbone of the food system - everyone wins.
Education
Consumers who understand the impact of their food choices, and business-savvy farmers, fishermen, and other food producers can stimulate business development, as well as increase revenue flowing through the food system and greater economy.

Market Development
New connections with institutions, wholesalers, and retail buyers will allow local producers to scale up operations and increase profitability.

The potential approaches and suggested indicators outlined in this document are designed to inspire larger conversation and action around how we can best support food enterprises and improve New Hampshire’s food system. Through the Viability Initiative the NH Food Alliance will identify what is working well, where there are gaps, and how to address those gaps to benefit New Hampshire’s people, communities, businesses, and environment. Keep reading to learn more about the NH Food Alliance, the Viability Initiative, and how you can get involved!

Food Accessibility
Improving access to local food for all people in New Hampshire will help grow the overall market, a win-win for healthy consumers and food businesses.

Land and Sea Resources
Long-term food security is strengthened when farmers have access to and can afford productive farmland, and fishermen can earn a living from their enterprises.
The Need for a Viability Initiative

Interest in local food is booming in New Hampshire, creating opportunities for innovation and entrepreneurship in local and regional food enterprises. And yet, enterprises throughout the food system in New Hampshire face unique obstacles. Our growing season is short, farmland is costly, fish populations are dwindling, and distance can be an obstacle to developing niche markets. In many areas, infrastructure—from cold storage to large animal veterinarians—to support a growing food system is missing. Meanwhile, despite our state’s relative wealth compared nationally, nearly one in ten residents struggle to put food on the table.

By focusing our first initiative on farm, fish, and food enterprise viability, we can help support the entrepreneurial backbone of the food system, and at the same time address key issues related to food access, healthy communities, and natural resources.

Numerous groups and initiatives exist in New Hampshire to help support farms, fisheries, and food businesses. Collaborating through a network approach to address viability will allow us to aggregate knowledge of the New Hampshire food system, align work and infrastructure across food system sectors, and connect and learn together to speed progress toward our goals. The Food Alliance is building upon the work already being done by connecting individuals, businesses, and organizations across the state. The Viability Initiative offers a common framework to guide our collaborative work, so that we can more successfully address challenges and meet shared goals.

The NH Food Alliance has heard from many people across the state who value a regionally independent food system that supports our economy and buffers against disruptions in national and global food supplies and markets.
EDUCATION

The number of beginning farmers increased by >15% between 2002 and 2011.¹

PAGE 10

FOOD ACCESSIBILITY

If every New Hampshire resident spent just $5 a week on local food, over $338 million would be added to the state’s economy.³

PAGE 18

MARKET DEVELOPMENT

The value of NH agricultural products in NH sold directly to individuals for human consumption increased by over 35% between 2007—2012, and is one of the highest in the country.²

PAGE 14

LAND AND SEA RESOURCES

Between 1982—2007 38,500 acres of the state’s agricultural land was permanently lost to development.⁴

PAGE 22
Identifying our First Initiative

The Food Alliance spent over two years building strong relationships and developing shared understandings and goals with a broad group of individuals and organizations across the food system. Through listening sessions involving over two hundred people, extensive research of food systems reports and related literature, and conversations with specific stakeholder groups, the NH Food Alliance identified critical opportunities and challenges in the New Hampshire food system. From among these priority concerns, we then identified potential opportunity areas, or parts of the system where a targeted shift can result in positive changes throughout the rest of the system. Farm, fish, and food enterprise viability emerged as the most promising entry point among interconnected opportunity areas to begin our collaborative work.

This resulting Viability Initiative outlines the approaches and recommendations that reflect the voices and unique interests and needs of Granite Staters and as such, are meant to evolve, change and adapt moving forward. A Viability Working Group will use the suggested goals, approaches, and indicators in this document to develop a focused action plan for the Viability Initiative and identify specific partners who will collaborate to implement priority actions. We hope that all NH Food Alliance participants will use this document to guide their work and priorities, ensuring we are all working together to support viable farms, fisheries, and food enterprises in New Hampshire.

As the NH Food Alliance grows, we anticipate developing additional initiatives to address other food system opportunities and concerns. We believe that we can have the greatest impact now by focusing our initial efforts on the complex challenge of viability, while continuing to build and develop the larger network.

The Viability Initiative is organized around four opportunity areas that support farm, fish, and food enterprises: education, market development, food accessibility, and land and sea resources.

Each opportunity area includes:
- A description of how each opportunity area supports viability;
- A description of challenges;
- Suggested goals;
- Suggested short, medium, and long-term approaches to meet goals; and
- Suggested indicators to measure progress.

The success of the NH Food Alliance Viability Initiative ultimately depends on a healthy network that is characterized by strong communication, connectivity, collaboration, learning, research, diversity, equity, and transparency. The Viability Initiative is designed to catalyze conversation and collaboration around viability; it is not a rigid plan to be followed but a first step toward creating positive, lasting change for enterprises, communities, and residents in New Hampshire.

### 2013
**DESIGN & CONNECT**
- Designed a network structure and a process for identifying goals and strategies.
- Reviewed existing food system plans, reports, and data.
- Built connections and relationships across the New Hampshire food system.

### 2014-2015
**ENGAGE & DEVELOP**
- Engaged 250+ food system stakeholders via listening sessions, focus groups, and workshops.
- Developed a shared vision, goals, and strategy for the network.
- Synthesized research, identified leverage areas, and defined goals and approaches for a first initiative focused on enterprise viability.

### 2016+
**COLLABORATE & ADAPT**
- Prioritize and revise goals and approaches outlined in Viability Initiative.
- Collaborate to implement, monitor, and adapt the Viability Initiative as needed.
- Nurture the network and develop additional initiatives as NH Food Alliance grows.

### OUTCOMES
- Shared vision and goals for the New Hampshire food system.
- Connection and collective action across the state.
- A food system that works for all: people, businesses, communities, and the environment.
The NH Food Alliance strives to enhance network health while advancing our first initiative focused on enterprise viability. The same factors that allow us to effectively support the network—connectivity, transparency, diversity, collaboration—will also allow us to successfully meet our viability goals.
How education supports viability

With opportunities to improve their business and financial planning skills, food entrepreneurs can improve their long-term profitability, as well as provide job and lifestyle satisfaction for themselves and their employees. In addition, consumers who understand their local food system and the importance of local agriculture to our state’s economy, community health, and heritage will be more likely to support and purchase food from local farms and fisheries.

Ben Fisk, maple syrup producer and owner of Ben’s Sugar Shack in Temple, NH started tapping trees at age 5. Today, at 27, Ben’s Sugar Shack employs 15 people and last year produced 5,100 gallons of maple syrup that was sold in 4,000 stores across the nation. Ben’s entrepreneurial success is due both to his passion for his work and because he consistently seeks out new opportunities for learning and growth. Ben was able to increase his inventory and refine his business model by working with a financial consultant provided by the NH Community Loan Fund. Both have set his business up for more growth and financing in the future. “The Loan Fund is tremendous to work with. They will provide whatever assistance you need—financial or business-related—to help guide you towards bigger growth opportunities,” says Ben. Today, Ben’s Sugar Shack is a diverse operation offering much more than syrup. While 75% of Ben’s product is sold to the wholesale market as far afield as California, he has also expanded his retail offerings at his sugar shack in Temple, with tours, a host of maple related products, and seasonal produce.
Challenges to Education

Growing urban and suburban populations increase the number of consumers who are disconnected from agriculture and fisheries, and don’t understand how food gets from farm (or sea) to table.

Some New Hampshire consumers do not have the skills necessary to prepare fresh food, and still others believe that preparing fresh food is too time consuming.

Many New Hampshire farms are currently not profitable.

Food entrepreneurs may have a difficult time acquiring the funds or financial planning assistance necessary for getting started or scaling up.

Goal

Develop and support programs and campaigns to help consumers understand how eating locally strengthens our economy, improves our well-being, and protects our rural landscapes and unique New Hampshire heritage.

Approaches

Short-term
Gather information to better understand New Hampshire residents and their perception of, and attitudes toward, the food system; identify existing efforts geared toward consumer education in the state.

Mid-term
Support, enhance, and coordinate efforts to educate consumers, food buyers, and retailers about food production and fisheries in New Hampshire; support education efforts focused on raising community awareness of the values and needs of farming and fishing businesses to reduce conflicts and over-regulation at the municipal level; promote educational strategies that enhance fresh food preparation skills and nutrition understanding.

Long-term
Create a culture that values local food through a statewide creative communications and education campaign that includes storytelling, music, art, and celebration, while making New Hampshire food system data easily accessible and understandable.

Goal

Make business and financial planning assistance readily available and accessible to all New Hampshire producers, fishermen, and food entrepreneurs.

Approaches

Short-term
Gather information to improve our understanding of the factors that affect long-term profitability of farms and food businesses and identify gaps in support services to entrepreneurs.

Mid-term
Enhance coordination of, and expand resources for, business and financial education providers and programs that support farm and fishing operators.

Long-term
Create a business and economic development climate that recognizes farm, fish, and food enterprises as key components of New Hampshire’s overall community and economic development objectives.
“By developing a network and building collaborations and education around available services, the Food Alliance will allow a wider population to be aware of the organizations I work with and increase utilization of those services.”

- Cara Cargill, Land for Good, NHAMP
How market development supports viability

Developing and fostering markets is essential for maintaining the economic viability of any enterprise. New and strategic connections between producers and buyers, including innovative approaches to aggregation and distribution, will allow producers and food entrepreneurs to improve profitability.

Three River Farmers Alliance (Three River) is a collaborative effort among several farms that is meeting the growing demand for local food by connecting farmers to farmers, and farmers to markets. The farms formed a food distribution company to provide a one-stop shop for ordering everything from vegetables to meats. Three River is “the first stepping stone toward a reliable local food distribution network,” says Andre Cantelmo, one of the founding farmers. “It’s the connection between farmers and consumers that has been missing.” This new marketplace lowers the cost of distribution for producers, making it economical to offer even small amounts of food to local communities. Both farmers and retailers benefit. “Having a weekly delivery system between multiple farms is very efficient and makes so much sense,” says Gary Kim, owner of Anju restaurant in Kittery, Maine. “I wish all farms were involved.”
Many New Hampshire farmers and fishermen are not of scale to meet the demands of wholesale markets.

Most New Hampshire consumers (as well as chefs and food buyers) are not familiar with the types of local fish now harvested to replace dwindling populations of fish traditionally caught in this area.

Producers struggle to move food during times of abundance due to a lack of infrastructure for local food sales and limitations in distribution.

State and federal regulations can be cumbersome and costly to address.

Goal
Develop and expand diverse, reliable, and profitable market channels for farmers, fishermen, and food entrepreneurs.

Goal
Assist producers and food entrepreneurs in meeting the production and distribution demands of diverse market channels.

Approaches

Short-term
Create and facilitate new and strategic connections with institutional and retail markets.

Mid-term
Promote and support existing efforts to brand local products (e.g., NH Made, NH Seafood); coordinate information about producers and products around the state to make it easier for institutions and retailers to readily find and procure local food options; facilitate and support development of food aggregation and distribution enterprises to conveniently and efficiently connect local food producers and buyers.

Long-term
Seek legislation to establish a “buy local” policy for the purchase of New Hampshire or New England grown products by state institutions and agencies. Dedicating some food purchases towards local and regionally produced foods would promote job growth and ensure that money spent by New Englanders is promoting the regional economy.

Approaches

Short-term
Enhance the capacity of UNH Cooperative Extension and other entities to provide technical assistance to new and experienced farmers and fishermen related to production, value-added processing, and meeting regulatory demands of wholesale markets.

Mid-term
Support efforts by food system entrepreneurs to form and operate cooperatives or other innovative approaches to aggregating products, to facilitate sales in the face of growing food industry consolidation.

Long-term
Improve the distribution infrastructure for local foods. Support efforts by food system entrepreneurs to create and form innovative approaches to distribution infrastructure for local food.
“The first Community Supported Fishery in New Hampshire provides a whole new concept to buying seafood. We’re in more restaurants in the Seacoast than ever before. We’re selling through health food stores and have recently been asked to introduce fish into our local hospitals.”

- Andrea Tomlinson manager, NH Community Seafood
How food accessibility supports viability

One way of increasing market opportunities is to increase the number of people who consume local food. Linking public food support spending such as SNAP to local food benefits both low-income residents and producers who have new customers for their products; New Hampshire Farm to School, Farm to College, and Farm to Hospital provide other avenues for institutions to support the New Hampshire economy, while residents access and enjoy locally grown and harvested products. By making local food more accessible to all, we create a win-win-win for producers, businesses, and consumers.

Thanks to a partnership between the New Hampshire Food Bank and Wholesome Wave, New Hampshire Supplemental Nutrition Assistance Program (SNAP, formerly known as food stamps) recipients can now receive extra funds for the purchase of fruits and vegetables at farmers’ markets. Called Granite State Market Match, the program matches SNAP dollar for dollar (up to a $10 cap in some locations) at participating markets. As one participating farmer describes it, “we benefit financially, the customers benefit financially, and we all are happier and healthier.” The NH Food Bank, through a USDA Food Insecurity Nutrition Incentive grant, will distribute $130,000 (over 3 years) to New Hampshire SNAP recipients, which with the match, could add up to over $300,000 for farmers as income.
Challenges to Food Accessibility
New Hampshire has seen escalating rates of food poverty and food insecurity over the past ten years.

Locally produced foods often have a higher production cost and can be more expensive than food from outside the New England region.

Lack of retailers and poor transportation infrastructure in some rural areas limits access and distribution of locally produced food.

Policy and reimbursement rates for school breakfast and lunch often make it difficult to shift funding for purchasing from local farmers and fisherman.

Goal
Consumers of all ages, ethnicities, and income levels will have convenient access to, and can afford, locally produced foods.

Approaches

Short-term
Increase the number of low-income families who purchase and prepare local food from retail and direct markets by supporting and expanding programs such as Granite State Market Match and Cooking Matters.

Mid-term
Work with institutions and businesses to develop contract language about the purchase of local foods through their requests for proposals.

Long-term
Collaborate with business and community economic development planners to develop new delivery models that will address transportation and distribution infrastructure and the lack of retail options that hinder access to purchasing local food. Support policies and innovation that result in economic opportunities for New Hampshire residents that build consumer capacity to purchase healthy foods.

“The Food Alliance supports our organization by offering connections outside our own organization. It allows us to network and receive feedback from others working on similar initiatives, projects, and goals.”
- Alicia Chevoor, Seacoast Family Food Pantry
Federal Programs

Cash payments from federal food programs including school lunch, school breakfast, child/adult day care, and summer feeding totaled over $33 million in 2014. By using some of this money for local food purchasing, we can get more local food to state residents, and increase farmer income.6

SNAP Benefits

For each year since 2010, New Hampshire residents have been eligible for between $140 million to $166 million in SNAP benefits. 6a

According to the USDA, SNAP benefits multiply beyond the direct cash benefits to recipients: for each $1 in SNAP benefits, $1.80 of economic activity is generated, as grocers and farmers pay their employees and suppliers, who in turn shop, create jobs, and pay their bills.7, 8
How land and sea resources support viability

There are several ways to ensure that farming and fishing are viable for this and future generations: make agricultural land, healthy soils, and marine resources available and accessible to farmers and fishermen; support and create local and state policies that make owning, managing, and investing in farmland affordable; and advocate for policies and regulations that ensure our local fishing and aquaculture industries will have opportunities for sustainable seafood harvest and production.

Wingate Farm—a 5th generation family farm in Hinsdale, NH—is now permanently protected through an innovative conservation program. “What was most gratifying to me was the way that our local towns, Winchester and Hinsdale, stepped up and budgeted money to help fund the Conservation Easement at Wingate. I think they recognize that this kind of program benefits not just our family but the entire community. It’s a long range viewpoint that this will enhance the overall quality of life in both towns,” says Peter Pettengill of Wingate Farm.

In addition to the 60-acre farm being permanently conserved, provisions were made to ensure that the land remains accessible and affordable to farmers into the future. “Through innovative conservation we can help our current and future farmers get on and stay on the land—this in turn helps towns protect their community heritage, increase food access, and strengthen rural economies,” says Jamie Pottern of Mount Grace Land Conservation Trust, which led the conservation effort.
Challenges to Land and Sea Resources

Prime agricultural land in New Hampshire is lost to permanent development at alarming rates.

High land prices, zoning regulations, and taxes can make it difficult for many farmers to purchase land and/or invest in infrastructure necessary for their farming operation.

Neighbors and public officials unfamiliar with the operations of a working farm and the state’s Right to Farm law, can create challenges for New Hampshire farmers.

Strict catch limits, a limited capacity to fish healthy stocks due to management, and ecological and fishing gear constraints, can challenge the ability of fisherman to harvest a sufficient amount of fish to remain economically viable.

Goal

Support, create, and implement uniform policies and programs that conserve and maintain the agricultural use of prime and locally important agricultural land and soil, as well as marine resources, throughout the state.

Approaches

Short-term
Improve coordination and connection between land trusts, producer, harvester, and conservation organizations, and state and federal agencies as a way to develop innovative strategies for maintaining farmland and sea access, while enhancing soil, water, and marine ecosystem health.

Mid-term
Support and expand policies and strategies that maintain or expand the availability of prime agricultural land and soils (e.g., Current Use assessment, Right to Farm, Agricultural Commissions, Agricultural Lands Program); advocate for policies that support our local fishing and aquaculture industries.

Long-term
Make more money available to maintain farmland, improve soil health, and sustainably manage and monitor our local fishing and aquaculture industries.

Goal

Support, create, and implement policies and programs that help new and existing farm businesses gain secure access to, and afford, farmland.

Approaches

Short-term
Support and create farm seeker and land transfer programs that integrate land, business, and human resources support to assist farmers in accessing secure tenure and/or acquiring farmland.

Mid-term
Promote state policy that increases land available to farmers through support of state funding for farmland conservation, and advocating for tax incentives that encourage landowners to lease/rent their land to farmers; educate state authorities about the contributions of sustainable aquaculture production and techniques to prevent over-regulation that reduces viability by raising costs.

Long-term
Support changes to property tax structures to make owning and investing in farmland and agricultural enterprises affordable.
“The Food Alliance catalyzes a broad voice for the need to address land requirements of farm businesses.”

- Ian McSweeney, Russell Farm and Forest Conservation Foundation
Stonyfield: A New England Story

Stonyfield is committed to helping the organic dairy industry not just survive, but thrive. Through custom technical assistance for all producers who contract directly with Stonyfield, farmers receive access to personalized support from industry professionals, which allows farmers to optimize and grow their business. According to Kristi Sayer, from Rocky Ridge Farm LLC in Canton, ME, “Stonyfield’s technical assistance program has allowed us to move our business forward with tailored support for our family’s unique needs. Our farm is in a better place and we look forward to building on the progress that’s been made.” Britt Lundgren, director of organic and sustainable agriculture for Stonyfield notes that by helping farmers, Stonyfield also benefits. Britt recognizes the importance of the dairy industry to New England’s agricultural economy. “A healthy dairy sector is still a vital part of the health of our agricultural economy in New England, and we believe it is possible to grow that sector and demonstrate to a new generation of farmers that this is a viable and desirable career path.”

“Our hope is that the technical assistance program will help producers improve their bottom line and thus their long term viability and sustainability. In the long run, this means a higher quality and more stable supply of milk for us.”

- Britt Lundgren, director of organic and sustainable agriculture for Stonyfield
New England region connections that support viability

Citizens across New England have developed a vision for producing half of the region’s food needs by 2060. This vision sees growth in the food system as the basis for a strong, resilient regional economy that collaborates effectively with other industries. It also sees a future where people can make a viable living through satisfying and meaningful employment growing, processing, and distributing food while contributing to the vitality and health of their communities. By joining in this broader conversation, there is opportunity to expand New Hampshire’s role within the regional food system, allowing each state to build on its strengths.

At the Food Solutions New England regional summit in June 2015, NH Food Alliance participants identified three opportunities for regional collaboration that would also support farm, fish, and food enterprise viability in New Hampshire.

1. **Reciprocal Licensing**
   Identify barriers that make selling agricultural products across state lines unnecessarily difficult, and adopt reciprocal licensing that would allow producers in New England to more easily sell products throughout the region.

2. **Leveraging Federal Funds**
   Identify and take advantage of underutilized federal and matching funds that can be used to protect farmland and support local food sales in the region.

3. **Buy New England Campaign**
   Branding New England produced and processed products is one way to increase local sales, keeping money circulating within the regional economy. This would ultimately increase revenue and support local businesses, and allow consumers to see themselves as stewards within their communities.

The NH Food Alliance will continue to work with Food Solutions New England to build connections across the region. Additionally, we will work together to develop and track shared indicators of food system health, and to advocate for state and federal policies that support farm, fish, and food enterprise viability in New England.
We can do it together!

No single institution, organization, or entity can effectively address the complex and dynamic issue of farm, fish, and food enterprise viability in New Hampshire. Collaboration between organizations, institutions, businesses, communities, and individuals is critical to achieve lasting, meaningful results. The NH Food Alliance combines a food systems perspective, a network approach, and a collective impact framework to promote long-term collaboration that adapts and responds to changing conditions and new ideas.

A Network Approach

Network collaboration means working with others toward larger shared goals. Whether you are engaged in food system work in a neighborhood school, on a farm or a fishing boat, at a local food pantry, or in one of a thousand other settings, your individual efforts can be purposefully connected to those of others. The NH Food Alliance connects people and resources across the New Hampshire food system to achieve greater impact than an individual or organization can achieve on its own.

In a network, leadership and action are distributed across many groups; a robust, well-connected NH Food Alliance will ensure that the goals and approaches identified in the Viability Initiative are enacted, monitored, evaluated, and adapted on an ongoing basis. Network participants will continue to build and nurture the network, collaborate on strategic goals, and learn from successes and challenges.

Harnessing the power of networked collaboration and collective impact models to address complex food system challenges is a growing strategy at the national, regional, state, and community levels. Working in a networked way involves new approaches to solving problems and embracing opportunities. The Monitor Institute recognizes five key ways that networks can benefit their participants and impact society: weaving social ties, accessing new and diverse perspectives, openly building and sharing knowledge, creating infrastructure for widespread engagement, and coordinating resources and action. The Food Alliance helps to catalyze these benefits by making it possible for groups addressing farm, fish, and food enterprise viability to communicate, connect, and collaborate more effectively.

Explore the Food System

Search the NH Food Alliance Partner Database. This tool will allow you to connect with potential partners, see a snapshot of the work going on in different regions, and learn more about the various organizations doing important food system work in the state of New Hampshire.

nhfoodalliance.com/explore
Food Systems Perspective

The Viability Initiative is based on a “food systems perspective.” Food is a powerful driver of economic development, public and community health, and vibrant working landscapes. When we strengthen food enterprise viability everyone wins. With this shared understanding, we can engage other sectors and organizations not traditionally focused on viability to join the effort and strengthen their own as well as our shared work.

The simple diagram above illustrates basic food system activities from farm to table to compost; the producers, entrepreneurs, institutions, people, initiatives, and agencies that support these processes make up the food system network.
Collective Impact

The NH Food Alliance embraces the concept of collective impact, or the idea that greater connectivity and goal alignment between stakeholders (in any complex system) ultimately leads to more effective action and lasting change.\(^\text{11}\) As diverse groups and individuals build relationships and learn from one another, they share resources, create common goals, and collaborate more effectively. The NH Food Alliance incorporates the five conditions necessary to achieve meaningful and lasting collective impact: a common agenda, mutually reinforcing activities, continuous communication, shared measurement, and backbone support.

Common agenda
The Viability Initiative articulates a shared vision and identifies approaches to strengthening the New Hampshire food system by addressing farm, fish, and food enterprise viability over the short, medium, and long-term.

Mutually reinforcing activities
The NH Food Alliance supports new and existing programs, projects, and organizations; advances new ideas; and coordinates actions among participants.

Continuous communication
Network participants communicate, share resources, learn from one another, and coordinate initiatives through easily accessible communication channels such as a website, social media, newsletters, and a Listserv.

Shared measurement
The Viability Initiative includes a set of indicators consistent with others in New England, for measuring progress towards goals and monitoring Viability Initiative effectiveness.

Backbone support
The University of New Hampshire Sustainability Institute (UNHSI), provides logistical and administrative support to coordinate continued network building and collaboration.

We hope the Viability Initiative will encourage greater participation in the NH Food Alliance, and that more groups will use this document as a tool to guide and prioritize their work in the food system. The more we work together toward shared goals, the more likely we are to succeed!
Make the New Hampshire Food Alliance work for you!

The NH Food Alliance connects people, ideas, and resources to enhance the good work already underway in the Granite State. Whether you are part of a business or organization, or a concerned consumer and community member, engaging with the NH Food Alliance can benefit you, your work, and your community.

LEARN about what’s happening throughout the state and get inspired to create success stories of your own! Visit our website, join the Listserv and Facebook group, follow NH Food Alliance on Twitter, and visit NH Food Alliance staff at various food system events around the state. You can also invite the NH Food Alliance to join events that you or your organization host. Our website has a searchable database, resources page, and events calendar, making it easy to learn about who is doing what, and what is working where. Go to www.nhfoodalliance.com for a copy of the Viability Initiative and share widely with others!

CONNECT with others at a NH Food Alliance statewide gathering or other sponsored events and activities. Seek out regional partners on our website to find out what is going on in your area of the state and meet others working on food system issues in your community. Get listed on our database of regional organizations and initiatives so that others can find you! Tell us about your work so that we can feature it on our blog and in our newsletters. Visit www.nhfoodalliance.com to learn about all the ways to get connected.

TAKE ACTION in your community and workplace. Share the Viability Initiative with co-workers, neighbors, and local leaders. Align goals and strategies for your organization, business, or community with those featured in this document to achieve maximum impact. Monitor NH Food Alliance communications to learn about specific calls to action – harnessing the power of the network to influence policy and debates about the future of our food system.

See yourself as part of the Alliance! ENGAGE with the NH FOOD ALLIANCE!

| Goal 1: Develop and support programs and campaigns to help consumers understand how eating locally strengthens our economy, improves our well-being, and protects our rural landscapes and unique New Hampshire heritage. | Short-term: Gather information to better understand New Hampshire residents and their perception of, and attitudes toward, the food system; identify existing efforts geared toward consumer education in the state.  
Mid-term: Support, enhance, and coordinate efforts to educate consumers, food buyers, and retailers about food production and fisheries in New Hampshire; support education efforts focused on raising community awareness of the values and needs of farming and fishing businesses to reduce conflicts and over-regulation at the municipal level; promote educational strategies that enhance fresh food preparation skills and nutrition understanding.  
Long-term: Create a culture that values local food through a statewide creative communications and education campaign that includes storytelling, music, art, and celebration, while making New Hampshire food system data easily accessible and understandable. |
| Goal 2: Make business and financial planning assistance readily available and accessible to all New Hampshire producers, fishermen, and food entrepreneurs. | Short-term: Gather information to improve our understanding of the factors that affect long-term profitability of farms and food businesses and identify gaps in support services to entrepreneurs.  
Mid-term: Enhance coordination and of expand resources for business and financial education providers and programs that support farm and fishing operators.  
Long-term: Create a business and economic development climate that recognizes farm, fish, and food enterprises as key components of New Hampshire's overall community and economic development objectives. |
| **MARKET DEVELOPMENT**        |                                                                                                                                                                                                                     |
| Goal 1: Develop and expand diverse, reliable, and profitable market channels for farmers, fishermen, and food entrepreneurs. | Short-term: Create and facilitate new and strategic connections with institutional and retail markets.  
Mid-term: Promote and support existing efforts to brand local products (e.g., NH Made, NH Seafood); coordinate information about producers and products around the state to make it easier for institutions and retailers to readily find and procure local food options; facilitate and support development of food aggregation and distribution enterprises to conveniently and efficiently connect local food producers and buyers.  
Long-term: Seek legislation to establish a “buy local” policy for the purchase of New Hampshire or New England grown products by state institutions and agencies. Dedicating some food purchases towards local and regionally produced foods would promote job growth and ensure that money spent by New Englanders is promoting the regional economy. |
| Goal 2: Assist producers and food entrepreneurs in meeting the production and distribution demands of diverse market channels. | Short-term: Enhance the capacity of UNH Cooperative Extension and other entities to provide technical assistance to new and experienced farmers and fishermen related to production, value-added processing, and marketing strategies.  
Mid-term: Support efforts by food system entrepreneurs to form and operate cooperatives or other innovative approaches to aggregating products, to facilitate sales in the face of growing food industry consolidation.  
Long-term: Improve the distribution infrastructure for local foods. Support efforts by food system entrepreneurs to create and form innovative approaches to distribution infrastructure for local food. |
| **FOOD ACCESSIBILITY**         |                                                                                                                                                                                                                     |
| Goal: Consumers of all ages, ethnicities, and income levels will have convenient access to, and can afford, locally produced foods. | Short-term: Increase the number of low-income families who purchase and prepare local food from retail and direct markets by supporting and expanding programs such as Granite State Market Match and Cooking Matters.  
Mid-term: Work with institutions and businesses to develop contract language about the purchase of local foods through their requests for proposals.  
Long-term: Collaborate with business and community economic development planners to develop new delivery models that will address transportation and distribution infrastructure and the lack of retail options that hinder access to purchasing local food. Support policies and innovation that result in economic opportunities for New Hampshire residents that build consumer capacity to purchase healthy foods. |
| **LAND AND SEA RESOURCES**     |                                                                                                                                                                                                                     |
| Goal 1: Support, create, and implement uniform policies and programs that conserve and maintain the agricultural use of prime and locally important agricultural land and soil, as well as marine resources, throughout the state. | Short-term: Improve coordination and connection between land trusts, producer, harvester, and conservation organizations, and state and federal agencies as a way to develop innovative strategies for maintaining farmland and sea access, while enhancing soil, water, and marine ecosystem health.  
Mid-term: Support and expand policies and strategies that maintain or expand the availability of prime agricultural land and soils (e.g., Current Use assessment, Right to Farm, Agricultural Commissions, Agricultural Lands Program); advocate for policies that support our local fishing and aquaculture industries.  
Long-term: Make more money available to maintain farmland, improve soil health, and sustainably manage and monitor our local fishing and aquaculture industries. |
| Goal 2: Support, create, and implement policies and programs that help new and existing farm businesses gain secure access to, and afford, farmland. | Short-term: Support and create farm seeker and land transfer programs that integrate land, business, and human resources support to assist farmers in accessing secure tenure and/or acquiring farmland.  
Mid-term: Promote state policy that increases land available to farmers through support of state funding for farmland conservation and advocating for tax incentives that encourage landowners to lease/rent their land to farmers; educate state authorities about the contributions of sustainable aquaculture production and techniques to prevent over-regulation that reduces viability by raising costs.  
Long-term: Support changes to property tax structures to make owning and investing in farmland and agricultural enterprises affordable. |
### Suggested Indicators

<table>
<thead>
<tr>
<th>Suggested Indicators</th>
<th>Data Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Trends in enrollment v. eligibility of NH Food Stamp programs</td>
<td>1. Department of Health and Human Services and UNHCE</td>
</tr>
<tr>
<td>2. Number of participants reached via SNAP and related federal food assistance education programs</td>
<td>2. UNHCE, and NH Food Bank</td>
</tr>
<tr>
<td>3. Number and populations reached of via culinary training programs</td>
<td>3. UNHCE, NH Food Bank, and Educational institutions</td>
</tr>
<tr>
<td>4. Number of FTS programs</td>
<td>4. NHFTS</td>
</tr>
<tr>
<td>5. Number of grocery stores/participants reached via direct education programs (e.g., in store tours)</td>
<td>5. NH Grocers Association</td>
</tr>
<tr>

### Data Source

These indicators are designed to monitor the impact of land and sea resources, food accessibility, and food opportunity areas on the community and economic well-being in New Hampshire. They also aim to support efforts by food system entrepreneurs to form and operate cooperatives or other innovative approaches to aggregating products, to facilitate sales in the face of growing food industry consolidation. The data sources include various agencies and organizations to gather comprehensive information on land use, food security, and economic development.
